We will positively impact the lives of others by becoming one of the world’s top five companies known for values-based leadership.
The Luck Stone project is the first construction equipment repowering project in Virginia to be funded by EPA. The new engines, to be repowered by Caterpillar, will result in a 50 percent reduction in nitrogen oxides and 65 percent reduction in particulate matter for each piece of equipment. Nitrogen oxides and particulate matter are prevalent air pollutants linked to asthma and other respiratory illness. Annually, the project will eliminate 30.85 tons of nitrogen oxide, two tons of particulate matter, 11.93 tons of carbon monoxide, and 2.74 tons of hydrocarbons from being emitted at the four plants.
